

THE CLIMATE COLLAGE

You're holding all the cards

WHAT IS IT?

THE CLIMATE COLLAGE IS A SCIENTIFIC, CREATIVE AND COLLABORATIVE WORKSHOP DESIGNED TO LEARN ABOUT CLIMATE CHANGE IN A FUN WAY.

Both educational and fact-based, this workshop can help you discover rapidly how climate works and the causes and consequences of its disruption. Taking part in this workshop will help you grasp the **complexity** of climate change, have an **overview** of this vast issue, and **understand** how to act efficiently.

In addition to providing **scientific facts**, the Climate Collage develops participants' **creativity** and communication **soft skills**.

This tool was created and shared under a Creative Commons license by **Cédric Ringenbach**.

WHAT DO YOU NEED TO CREATE A COLLAGE?

A set of Climate Collage cards

A team of 4 to 8 players

An expert moderator and coordinator

A 3 hour workshop to think, create and share

Some equipment (a table, paper, pens, pencils, tape, etc)

HOW DO YOU PLAY?

It's very simple.

Players form **teams of 4 to 8 players**. They are given cards which represent different components of climate change and together they **link causes to effects** and place the cards so as to show these links.

A moderator coaches one or several teams to guide them through the workshop, make sure there is good communication within the team and provide extra information.

THE 4 STAGES OF THE WORKSHOP:

1

1h - REASONING: discovering and linking the cards and creating the collage.

2

1h - CREATIVITY: relaxing, tuning the collage and creating a team spirit by decorating it.

3

15' - PRESENTATION: share what you learnt and consolidate it with a concise presentation.

4

45' - BRIEF: a calm discussion of players' feelings, positions, questions and solutions.

WHEN AND WITH WHO TO USE THE COLLAGE?

The Climate Collage is for novices and experts: novices will discover the subject and get rid of their potential prejudice while experts will deepen and structure their knowledge.

Using varying editions based on the players' knowledge level (an adult and a junior version) and their language (French, English, Chinese, Spanish, Arabic, Polish, Portuguese, etc), the non-profit organization "La Fresque du Climat" hopes to raise awareness for **1 million people about climate change worldwide by 2022.**

Whether you are **a business, a non-profit organization, a community or a school,** you can organize a collage during a training session, a group activity, a company team building or any other event.

WHY LEARN ABOUT CLIMATE CHANGE?

ALONG WITH THE DEPLETION OF RESOURCES AND THE ENVIRONMENTAL CRISIS, CLIMATE IS ONE OF THE MAJOR SOCIETAL ISSUES OF THE 21ST CENTURY.

Reducing the causes of climate disruption and adapting to its consequences will have an impact on all aspects of our societies and our lives.

At all age and in all contexts, people should know about the scientific basis of climate in order to **understand the situation, decipher information, form their own opinion and act on an individual and collective level.**

WHY USE THE COLLAGE?

FUN: acquire knowledge and know-how while having a good time.

COLLABORATIVE: The game draws on shared ideas and requires teamwork.

SIMPLE: very few resources (time, equipment, moderators ...) can help educate a large number of people.

SCIENTIFIC: all the data used comes from the official IPCC reports.

EDUCATIONAL: uses the 4 pillars of learning.

THE 4 PILLARS OF LEARNING:

REASONING

Going through causal links, numbers and graphs

FORMALIZING

Structuring thoughts as a collage and presenting what has been learnt during the session

IMAGINING

Visualizing climate interactions, and decorating the collage during the creative stage

FEELING

Expressing what you feel about the issue of climate, and share with the other players

A FEW NUMBERS (October 2019)

25 000

people participated in a collage

2 000

Moderators trained

THEY APPROVE...

"Tomorrow, climate change will gravely impede human activities. This scenario is complex and hard to grasp, and the Climate Collage helps shed light on it in an intelligent and useful way."

Nicolas Hulot, President of the **FNH (Foundation for Nature and Humans)**, former **Sustainability Minister in France**

"The Climate Collage is a great way to provide groups with momentum and individuals with a wake-up call! Here at TF1 we have used it as kick-off for a series of workshops about changing consuming habits. We have also implemented it in our IT department with the firm intent to show climate change is a multidimensional theme."

Catherine Puisieux, Director of Corporate Responsibility at **TF1 (TV channel)**

"Becoming aware of and learning about the climate issue while having fun and interacting with others is the best way to understand its complexity. This is why the Climate Collage is so brilliant: it brings to the table a gamified solution to raise awareness without blame and to encourage action!"

Fabrice Bonnifet, Director of Corporate Responsibility at **Bouygues**

"How does climate change work? One way to get an answer is to read the IPCC reports. Success guaranteed, but you need to read 2000 pages! The other way is to play with the Climate Collage. This participatory team game can be tailored to its audience. It allows participants to understand in just a few hours the main climate mechanisms despite their complexity. Try it and adopt it!"

Jean-Marc Jancovici, Expert with the **High Council for Climate**

"This tool is simple but not simplistic, it's precise, fun and fast, and it really raises awareness among participants. I recommend without hesitation!"

Aurélien Acquier, Professor - Head of Sustainability Transition at **ESCP Europe**
